RESCUE HARNESS

RGH5

The RGH5 is designed for use as a confined access harness. When used, the rescue strap keeps the operative in a near vertical position, which is preferred when recovering an unconscious casualty.

The front and rear attachment points can be used as standard fall arrest points. The rescue strap can be used for lifting and lowering, and also be used in certain fall arrest situations. High contrast stitching makes inspection easier. The addition of a flexible rear D pad provides additional comfort. The inclusion of easy slide shoulder buckles increases the speed and range of adjustment. Tail tidies allow for convenient and neat storage of excess webbing following adjustment. The way the harness has been designed minimises the amount of rigid webbing edges.
