

Hack10 Clevis Clutch

The Hack10 clevis clutch is specifically designed as a chain shortening device for use in Hackett grade 10 chain sling assemblies. Featuring a clevis attachment type, this component connects to master links and sub assemblies via a connector and a short length of chain. This configuration offers greater flexibility than other chain shortening devices. Manufactured from alloy steel, the Hack10 clevis clutch is 25% stronger than a grade 8 equivalent, delivering a greater working load limit without the need for a larger diameter chain sling.

- Standards:** designed and manufactured in accordance with EN1677-1, ASTM A952/A952M, and DIN PAS 1061 and suitable for use in chain slings certified to EN818-4.
- Product sizes:** available for chain sizes from 8mm to 16mm and with working load limits from 2.5 tonnes to 10.0 tonnes.
- Temperature:** operational temperature range of - 40°C to + 200°C without reduction in working load limit.
- Material:** alloy steel.
- Testing:** crack detection following heat treatment, and proof load tested to 2.5 times working load limit.
- Safety factor:** 4 : 1.
